

RUNFLEX GEAR COUPLINGS are designed for applications where high torque and balance is required. It consists of Forged sleeve with internal gear teeth and two identical Hubs with external gear teeth. The teeth of Hub and Sleeve are continuously in contact with each other transmitting torque from one end to another end and are designed to accommodate maximum angular, parallel and axial misalignment. The teeth are crowned for maximum load carrying capacity with minimum size.

RUNFLEX GEAR COUPLINGS are widely used in Cement plants, Conveyors and Elevators, Metal Rolling Mills, Paper Machinery, Cranes, Dredgers, Rubber and Plastic Industries, Compressors, Fans and Blowers, Screens and other general industries.

FEATURES :

- ▶ High power to weight ratio.
- ▶ Crown gear teeth for longer life.
- ▶ Less backlash error.
- ▶ High torque capacity.
- ▶ Compact design.
- ▶ Larger bore capacities.
- ▶ Reliable and Maintenance friendly.
- ▶ Fully interchangeable with other couplings.
